Shun-ichiro Karato

Adolph Knopf Professor
Department of Geology and Geophysics
Yale University

Yasuhiro Matsuda

Associate Professor
Institute for Advanced Studies on Asia
University of Tokyo

Jonathan Schell

Senior Research Fellow
Jackson Institute for Global Affairs
Yale University

Yoji Koda

Former Commander of the Self-Defense Fleet
Senior Research Fellow
Harvard University

Kotaro Tamura

Research Associate, Harvard University
Former Chairperson of the Infrastructure Committee
Japanese House of Councillors

On March 11th, a magnitude 9.0 megathrust earthquake struck off the coast of northern Japan. In the quake and the ensuing tsunami, thousands have lost their lives and more are stranded without help. The ensuing failure of the cooling systems at the Fukushima Nuclear Power Plant have led to an unprecedented challenge for Japan. This panel discussion, moderated by Jun Saito, Assistant Professor of Political Science at Yale, reviews special features of the disaster, analyzes what went wrong in the nuclear power plant, and investigates the implications for the future of Japan and the world. Following the panelist presentations, there will be a discussion of what the Yale community can do for disaster relief and prevention, as well as a candlelight vigil for victims and their families on Cross Campus at 8:30 PM.

Thursday, March 24, 2011

6.00 – 8.00 PM

**Yale University, Loria Center Auditorium,
190 York St, New Haven, CT**

Disaster relief donations will be collected at the event.

Candlelight Vigil following event on Cross Campus, 8:30 PM

Hope for Japan, A Night of Food and Song following Vigil

BK Dining Hall, 9 – 10:30 PM
